

FTP SERVER

PRIVATE SPACE FOR SHARING LARGE FILES ON THE INTERNET

The **FTP SERVER** service is a simple and smart solution for those who need to share larger files over the Internet. The customer receives one administration access to its FTP server through which he can assign any number of accesses to data that are saved on the server. Using the FTP client, it is possible to load data on the server. Any authorized users with Internet access can download the data from the server.

Who is the FTP SERVER designed for?

This service is designed for companies or individuals who need to distribute data to many users over the Internet.

FTP SERVER includes

- rental of a server with basic configuration and disc space of 1GB with an option to purchase further space later
- regimes of a private or public (anonymous) server
- regular back-up of data upon customer's request
- possibility of secured access to data using the FTPS protocol

Benefits of the FTP SERVER service

- very easy control for administrators as well as users
- possibility of setting the customer's server based on their individual needs
- servers are located in secured datacenters with backed-up high-capacity connectivity
- 24/7 monitoring

Technical specifications

FTP (File Transfer Protocol) virtual servers are operated on the GNU/Linux system. Upon agreement, Dial Telecom can also provide a virtual server based on the individual needs of a customer. FTP servers can have their own domain of the 2nd or 3rd level.

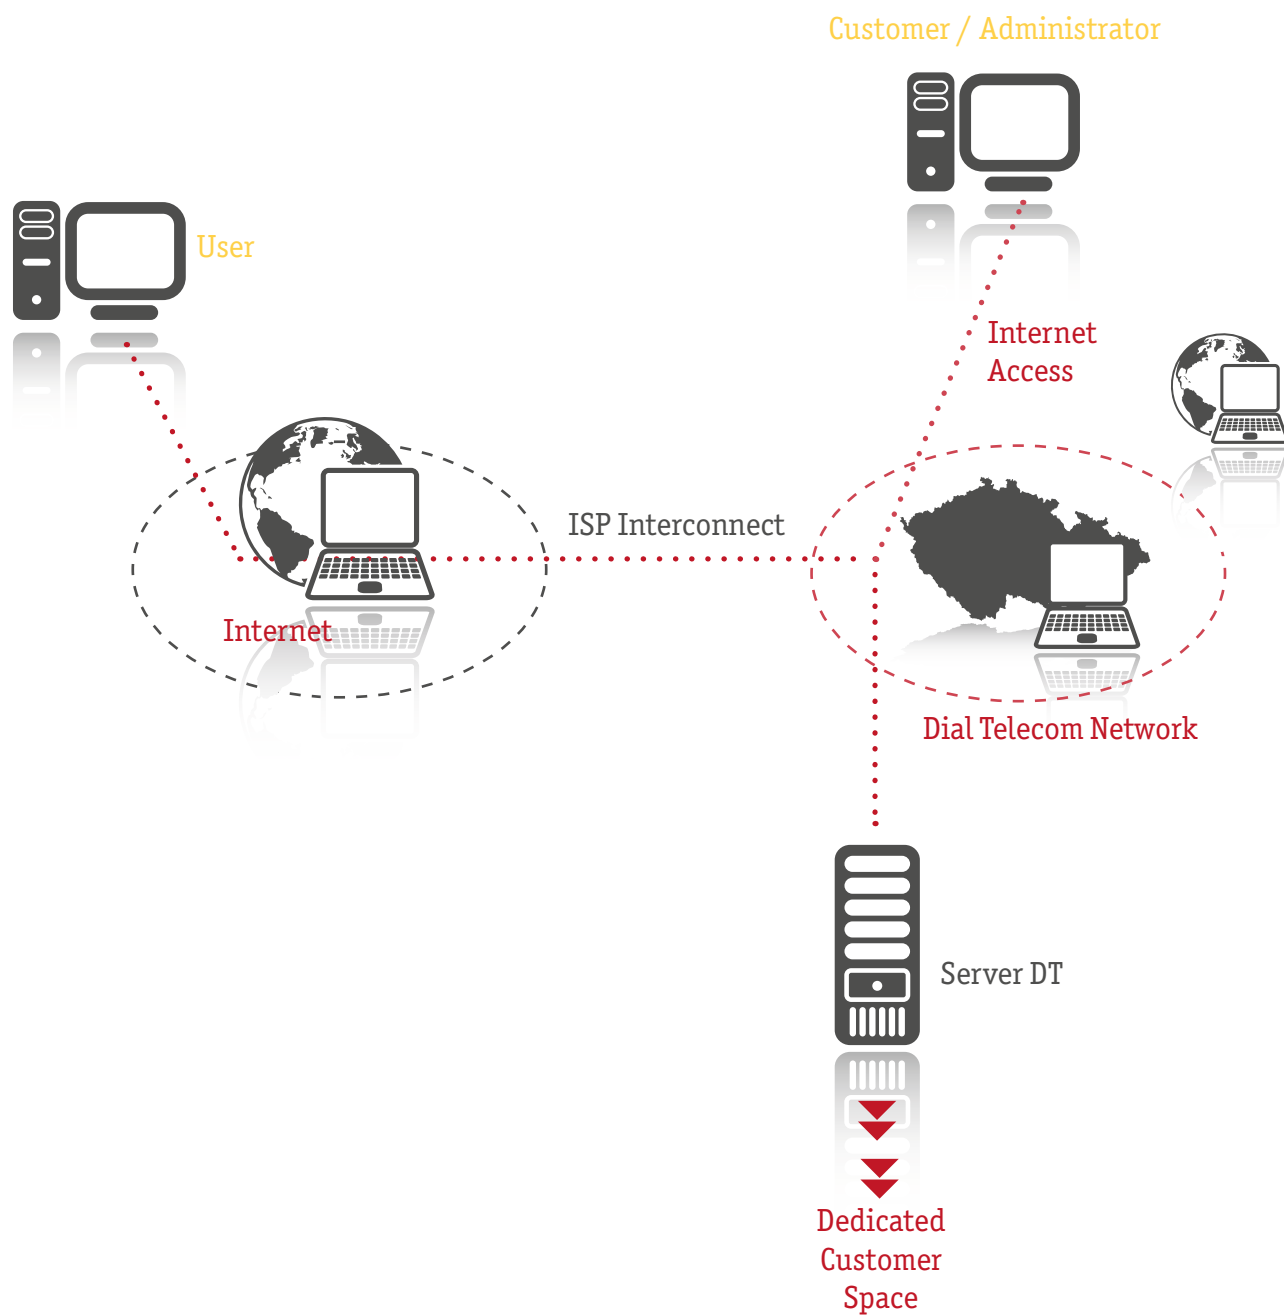

The FTP SERVER service is hosted in a data center with high-capacity and redundant connectivity into the Czech as well as international Internet, and is secured to withstand an electricity outage. Servers are administrated by qualified specialists, secured by firewalls and anti-virus protection, and monitored non-stop.

FTP SERVER is the optimal solution for sharing a larger volume of data with a wider group of users.
