

HDPE PIPE

LONG-TERM LEASE OR SALE OF PROTECTED CABLE PIPES LAID IN THE GROUND (HDPE)

Dial Telecom offers the lease of HDPE pipes on its infrastructure in the Prague metropolitan network and on the transit lines along the gas pipelines.

Who is the HDPE PIPE service designed for?

This leasing method is suitable for large operators of fixed and mobile networks who do not have their own strong backbone network; for whom the construction time or price of their own network is unacceptable and who want to keep the flexibility of the network under maximum control.

HDPE PIPE includes

- provision of an HDPE pipe for own cable and fiber blowing

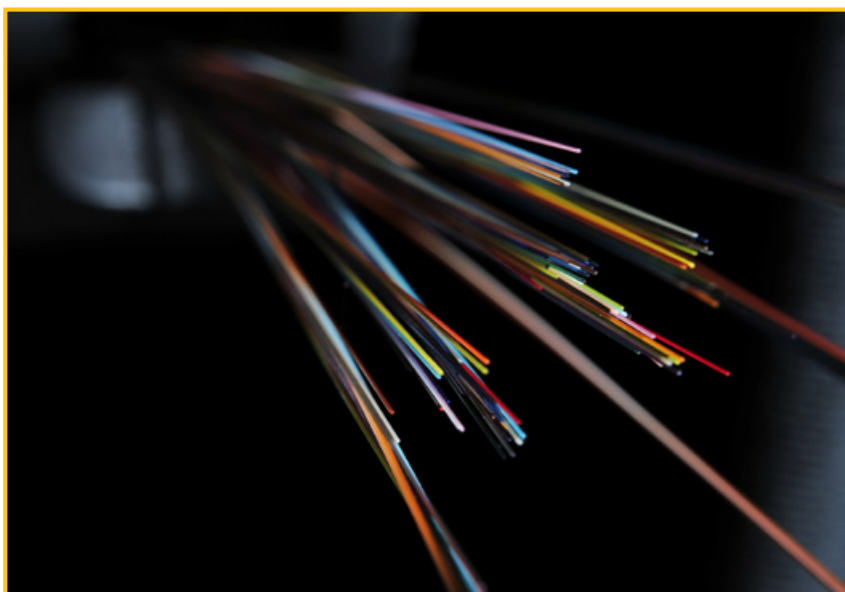

Benefits of HDPE PIPE

- full client control over the installed technology
- full client freedom to choose the type of cable and its features
- lower investment costs compared to constructing a new line
- fast construction of the new cable line
- non-stop servicing and line monitoring

Additional services

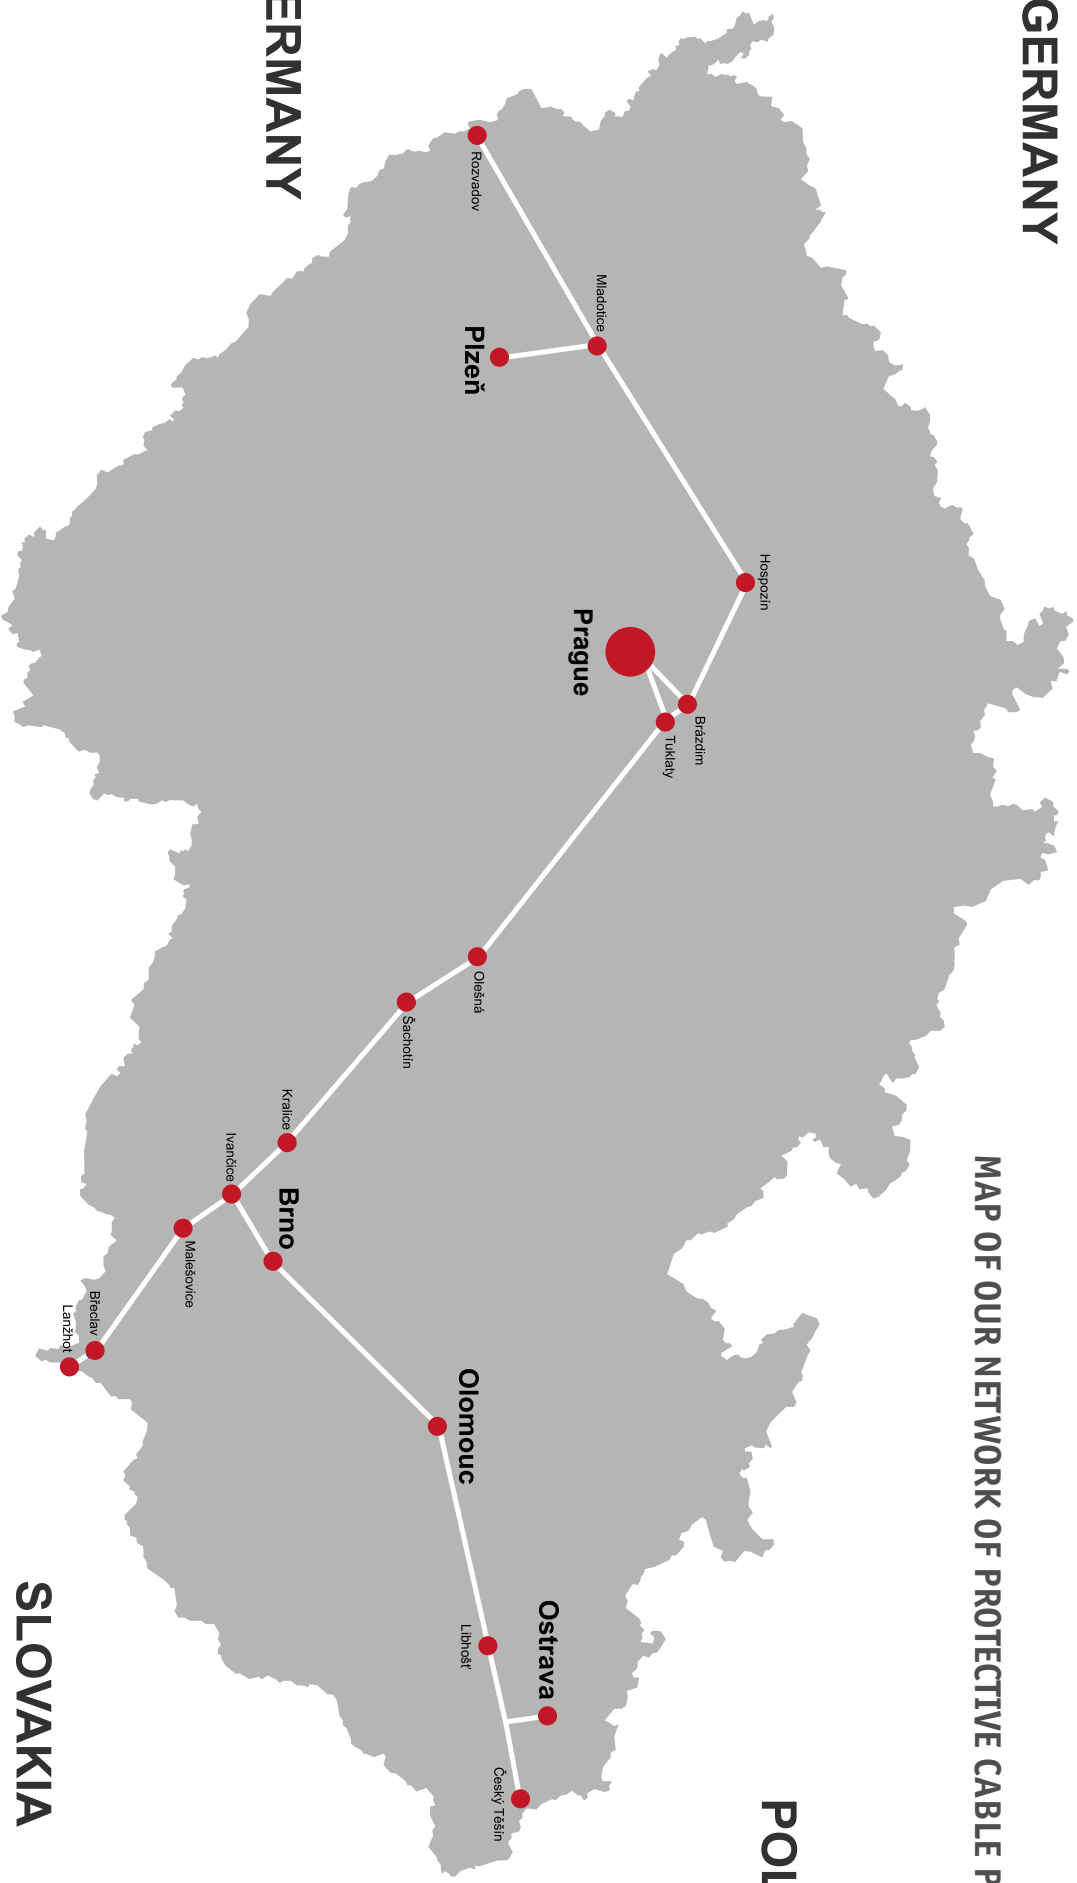

- regular checking and monitoring of the condition of the line
- automatic provision of line transfers in connection with continuously running construction work
- access to all cable shafts and repeaters for servicing of the client's cable
- linking of HDPE pipes to the additional lines constructed by the client
- non-stop contractual guarantee of repair time in case of damage

The HDPE pipes of Dial Telecom are laid in the security corridors along the gas pipelines in the Czech Republic, which are off limits to construction.
