# Internet Profi

**A complex service for company connection
to the Internet with a guaranteed symmetrical speed**

The Internet Profi service is a permanent connection to the Internet. Internet Profi is a comprehensive service including installation, access line, CPEs and Internet connection. Quantcom uses optical links, radio relay links or leased telecommunication circuits to implement the connection. After careful consideration by Quantcom staff, taking into account site accessibility and required capacity, the appropriate endpoint connection technology is selected. You can choose the Internet Profi service in many different variants, especially the capacity of the line, and thus optimally solve your Internet connection needs.

TECHNICAL DESCRIPTION

The Internet Profi service is implemented using an optical network or radio relay links. Within its backbone network, Quantcom is connected by several high-capacity backup connections to peering exchanges of the Czech and international Internet.
